

CloudLab Introductory Lab Report

Course Unit: CSC2202 Cloud Computing

Group Number: DAD

Date: April 7, 2026

No.	Name	Registration Number
1	Akankunda Rita	24/U/03072/PS
2	Aturinzire Hargreave	24/U/22603/PS
3	Ndagire Nairah	24/U/10032/PS
4	Mutebi Stuart	24/U/25953/PS
5	Nantale Cecilia	24/U/24555/PS

1. Introduction

This lab introduced us to CloudLab, a platform used to provision and manage cloud computing resources. The objective was to gain practical experience in setting up and accessing a remote server.

2. Activities Performed

We created CloudLab accounts and joined the CraneCloud project. An experiment (DAD-lab0) was created using a single Ubuntu node. The server was successfully provisioned, and its status changed to "Ready." We then configured SSH keys and logged into the server from a Windows machine, confirming successful connection.

3. What Worked Well

The experiment setup was straightforward, and server provisioning was successful. SSH access worked correctly, and group collaboration was effective.

4. Challenges Faced

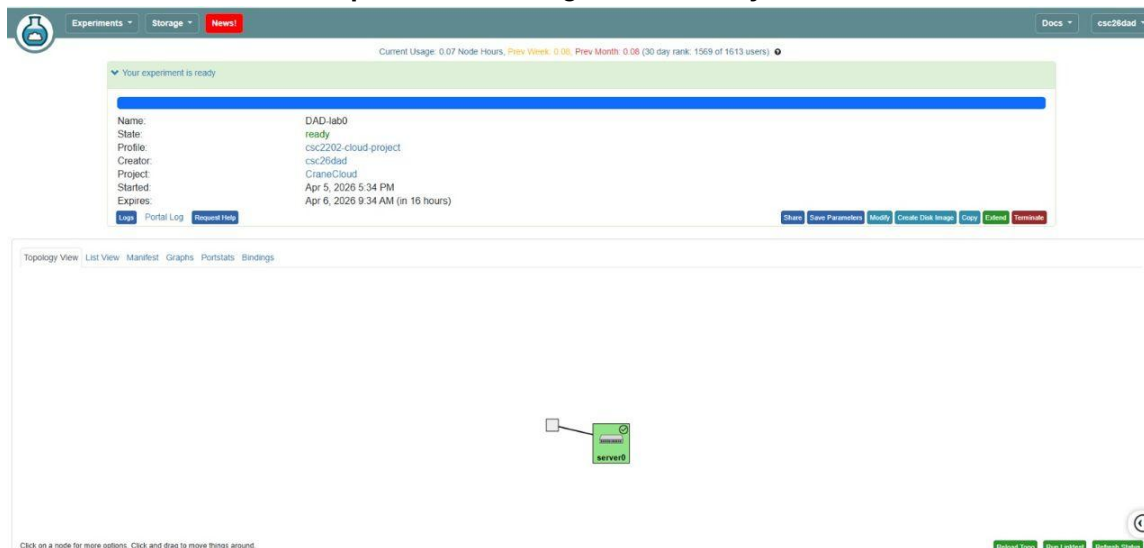

- We experienced delays in account approval and initial confusion navigating CloudLab.
- Some group members encountered a "Permission denied (publickey)" error during SSH setup, caused by the SSH agent not being configured on their Windows machines. This was resolved by starting the SSH agent via PowerShell and using ssh-add before reconnecting.
- We also faced confusion around the 16-hour experiment expiration policy.

5. Conclusion

The lab provided hands-on experience in cloud resource provisioning and remote server access, improving our understanding of cloud computing.

6. Evidence

Screenshot 1: CloudLab experiment showing status "Ready"

Screenshot 2: Successful login in the CloudLab node with the SSH key
